WEARABLE TECHNOLOGY

AUGMENTED & VIRTUAL REALITY

PREDICTIVE ANALYTICS

INTERACTIVE ENGINEERING

TECHNOLOGY USE CASES

Augmented & Virtual Reality

- Remote Expert (audits, site support and targeted programs i.e. remote ATC)
- Training

Interactive Engineering

- Dock safety
- Controlled access zones
- Robots/Co-bots

Exoskeletons/Exosuits

- Targeted ergonomic high-risk manual lifting
- Temporary use during upset conditions

Camera Vision & Predictive Analytics

- Realtime alert for high risk events and targeted high-risk awareness
- Data collection to evaluate frequency/severity of high-risk

Wearables

- Collection of environmental data within the work environment (sound, light, heat)
- Collection of at-risk biomechanics data as relates to teammate interaction with machines, their workstations and the jobs/tasks they perform every day

ARTIFICIAL INTELLIGENCE & PREDICTIVE ANALYTICS

Dictionary

Search for a word

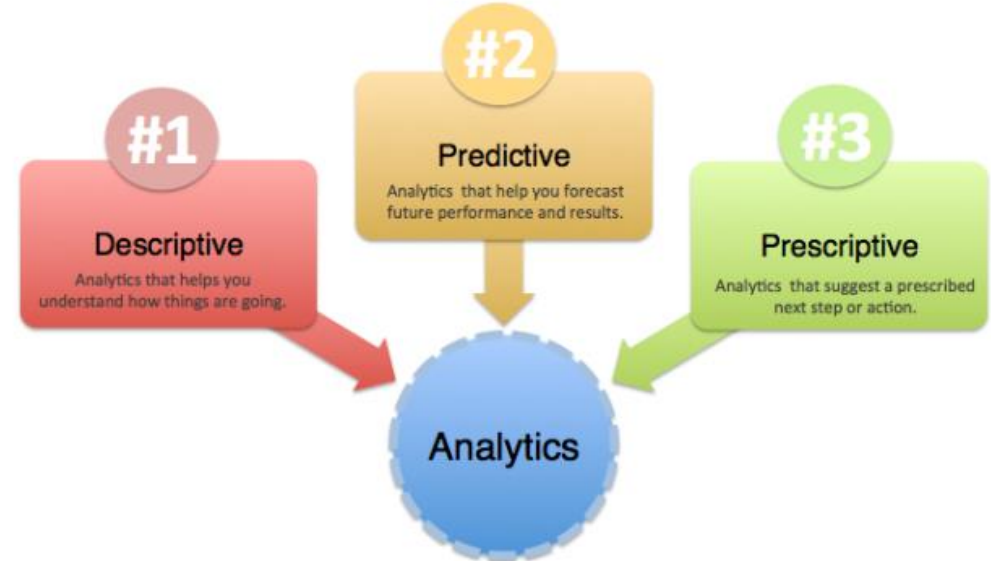

ar·ti·fi·cial in·tel·li·gence

/,ɑrdə'fiʃəl in'teləjəns/

noun

the theory and development of computer systems able to perform tasks that normally require human intelligence, such as visual perception, speech recognition, decision-making, and translation between languages.

WEARABLE TECHNOLOGY

THE FUTURE OF INDUSTRIAL SUSTAINABILITY: WORKER-CENTRIC AI™

Sentri360® is the only platform and interface industrial workplaces need to create and manage a proactive worker health, safety, and productivity program. Sentri360® utilizes Everguard's pioneered Worker-Centric AI™ technology, the first artificial intelligence (AI) platform to create a conscious environment powered by sensor fusion that senses distress and danger long before a human can.

Applications and Use Cases

WORKER WELLNESS

- PPE (Hard Hat, High Visibility Safety Vest, Gloves, Safety Glasses, Mask)
- Dehydration/Heat Stress
- Fitness/Illness
- Environmental (Air Quality, Temperature and Humidity, Noise, Carbon Monoxide, VOC)

OVEREXERTION/MSD

- Ergonomics
- Fatigue/Overexertion
- Musculoskeletal Disorders (Back, Shoulder, Ankle)

WORK ENVIRONMENT

- Virtual Fence (Restricted Area, Hazardous Area)
- Environmental Conditions (Water Leak, Fire, Smoke)

COLLISION/FALLS

- PPE Harness
- Guardrail Detection
- Vehicle-to-Worker
- Slips, Trips, Fall Detection

Sentri360® EHS Wearables Features

OVEREXERTION

MUSCULOSKELETAL DISORDERS (MSD)

SLIPS, TRIPS, FALLS

CONTACT/IMPACT

THERMAL STRESS/ DEHYDRATION

REAL-TIME ALERTS

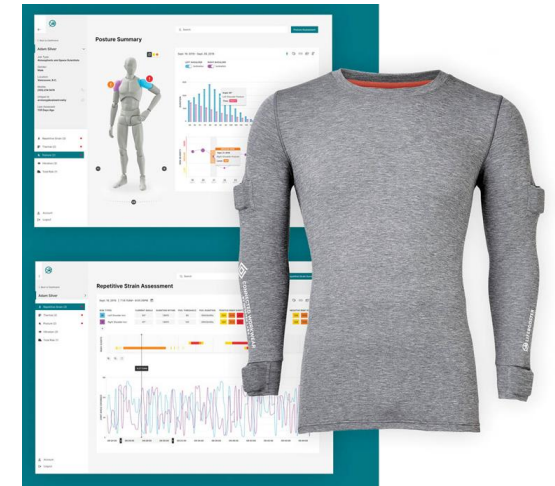

BODY MECHANICS WEARABLE TRIALS

Wearable Anatomy

AUGMENTED (AR) & VIRTUAL REALITY (VR)

Augmented Reality

Users can see virtual objects in their natural surroundings. For example, it can give them information about things in front of them.

Virtual Reality

An artificial environment where we can do things and interact with that environment using mobile devices such as VR goggles.

VR – TRAINING

- High risk training can be conducted in a virtual world (PIT, Line Breaking, LOTO)
- Virtual world can be a real 360° 3D mapping of our sites
- High risk hazard hunting in a safe but virtual site-specific environment
- Test frontline leaders competencies

AR – TRAINING – INSPECTIONS – REMOTE EXPERT

- Remote Expert can remotely join in via AR device (We use MS HoloLens)
- In the field of vision, user sees overlays, tags, icons, delineation, labels...
 - Lockout points, emergency shutoff locations, high risk/pinch points
 - Documents (SDS, JHA/SOP, LOTO Instructions)
 - Numeric sequence of start up instructions
 - Inspection points (ie. color coded, flashing, expired)
- Training guide to take new-hires on a tour to indicate life safety highlights (exits, fire extinguishers, emergency shutoff points, alarm locations)
- Maintenance support (grease points, calibration details, OEM info)

Mechanical Aid Exoskeletons

Cobots & Robots

Laser Scanners & Light curtains
